The Use of IV Therapy with Nutrients for Physicians ........................................... 7

- **Introduction** .................................................................................................. 7
- **Why IV Therapy?** ......................................................................................... 8

Chapter 1: In the Medical Literature: Specific Reported Actions and Benefits of Nutrients Given Intravenously .............................................................. 11

- **Alpha Lipoic Acid (ALA)** ............................................................................ 11
- **Vitamin A** ..................................................................................................... 11
- **Vitamin B₆ (pyridoxine) and Folate** ............................................................... 11
- **Vitamin B₁₂ (cyanocobalamín, hydroxocobalamín, methylcobalamín)** ...... 11
- **Vitamin C (ascorbate, ascorbic acid)** ........................................................... 12
- **L-Carnitine** .................................................................................................. 14
- **Coenzyme Q₁₀** ............................................................................................. 14
- **Glutathione (GSH)** ...................................................................................... 14
- **Vitamin K₁** ................................................................................................. 15
- **Magnesium** .................................................................................................. 15
- **Molybdenum** .............................................................................................. 18
- **N-Acetyl Cysteine (NAC)** ............................................................................ 18
- **Niacin** .......................................................................................................... 19
- **Phosphatidyl Choline** .................................................................................. 19
- **Sodium Bicarbonate (Bicarb)** ..................................................................... 19
- **Thiamine** ....................................................................................................... 20

Chapter 2: IV Therapy with Nutrients – Dosages, Safety, Precautions, Contraindications, Treatment of Adverse Reactions ................................................ 21

- **Dosages of Nutrients to Use for IV Therapy** ................................................ 21
- **Safety of IV Therapy** .................................................................................... 21
- **Use Preservative-free nutrients** ..................................................................... 22
- **IV Therapy Makes Patients Love You** .......................................................... 23
- **Laboratory Testing for Nutrients** .................................................................. 23
- **Contraindications to IV therapy** ................................................................... 24
- **Possible Reactions to IV Infusions** ............................................................... 25
- **Sensitivity to B-Complex – Methylation defects** .......................................... 25
- **Treatment of Adverse Reactions** ................................................................. 25
- **The Safety Record for IV Nutritional Therapy** ............................................. 26

Chapter 3: Calculation of Osmolarity ................................................................. 29
Chapter 6: Advanced IV Nutrient Protocols

Protocols for Migraine and Headaches

FDA Regulations

The FDA Speaks

Chapter 5: Basic Asthma Protocols and Step-by-Step Preparation & Administration of the Push and the Infusion Protocols in your Office

IV Protocols for Acute and Chronic Asthma

Acute Asthma Protocol - Given IV Push (60 cc syringe) with a 23 gauge needle

Chronic Asthma Protocol - Given by IV infusion (250 cc bottle)

Exactly How to Do It

Drawing up Nutrients: Asthma IV Push Protocol

Preparation Instructions for this “Push”: Drawing up the Nutrients

Preparation of the IV

Mixing: IV Drip Infusion for Chronic Asthma
